PROJECT REVIEW 2

Academic Project Tracking & Evaluation Management Platform

From project planning to system prototype

SECOND REVIEW PRESENTATION

Academic Project Tracking & Evaluation Management Platform

Presented by

Syed Shah Waseq Uddin | 160923733240

Roll No: 160923733198

Shared responsibility: planning, development, testing and documentation.

What we established in the first review

Project purpose

Provide a structured way to track academic project activities and evaluate progress.

Tracking dimensions

Scope, schedule, ownership and task status.

Evaluation approach

Review process, project output and supporting evidence.

Review 2 focus

Move from the project concept to the proposed system design and an initial frontend prototype.

Problem statement and proposed solution

Challenges in project coordination

- Project tasks and deadlines can be difficult to monitor
- Responsibilities may not be clear to every team member
- Progress updates and feedback can be scattered
- Evaluation needs records and supporting evidence

Proposed platform

- Keep project and student information organised
- Assign and track project tasks
- Record progress and faculty comments
- Support evaluation using project records and evidence

Goal: improve visibility, ownership and evidence throughout the project lifecycle.

System architecture and technology stack

Request flow: User interface → Flask application → MySQL database

Technology stack carried forward from the initial project plan. Database integration is a planned development step, not claimed as completed.

Main modules of the proposed platform

Dashboard

Quick view of projects, tasks and progress.

Student management

Maintain student details and team information.

Project registration

Register project title, guide and project details.

Progress tracking

Update task status and milestone progress.

Evaluation & marks

Record evaluation details and faculty comments.

Faculty feedback

Provide comments and follow-up actions.

How the platform is expected to work

Each review should result in a recorded status, feedback and a clear next action.

Implementation progress at Review 2

Completed in the current prototype

- Initial frontend prototype prepared
- Basic page navigation is working

Working prototype feature

- Add Student interaction is working

Next development tasks

- Build remaining module screens
- Connect frontend to Flask backend
- Set up MySQL tables and integration

To be tested

- Form validation and data handling
- Create, view, update and delete flows
- End-to-end testing

Note: dashboard figures or sample records, if shown in a demo, are illustrative data—not verified project results.

Proposed database entities

Students	Student ID • Name • Roll No • Email
Projects	Project ID • Title • Description • Guide ID
Tasks	Task ID • Project ID • Assigned To • Due Date • Status
Evaluations	Evaluation ID • Project ID • Review • Marks • Comments
Faculty	Faculty ID • Name • Email

These are proposed entities for database design; final fields may change during implementation.

Testing approach and current development challenges

Testing plan

1. Check navigation between screens
2. Validate student input fields
3. Test adding and displaying records
4. Verify edit and delete operations
5. Test backend and database connection

Development challenges to address

- Connecting frontend forms to backend routes
- Designing a consistent database structure
- Validating inputs and handling errors
- Keeping project status and evaluation records accurate

Testing will be performed module by module, followed by complete system testing.

Plan before the final review

01	**Complete frontend screens**	Dashboard, projects, tasks and evaluation pages
02	**Develop Flask backend**	Create routes and connect frontend requests
03	**Integrate MySQL**	Create tables and implement database operations
04	**Test and improve**	Validate forms, CRUD operations and error handling
05	**Prepare final evidence**	Capture real screenshots and complete documentation

Target: a tested, integrated platform ready for final demonstration.

Thank You
